	Urgent	Not Urgent
Important	Do (Your MVP) 1. Add applications with company name, job title, location, and application date. 2. View all saved applications and their details. 3. Update application statuses (Interested, Applied, Interview, Offer, Rejected). 4. Save and load application data using local files. 5. Search and filter applications by company, role, or status.	Schedule (For V2.0+) 1. Add application statistics, such as total applications, interviews, and offers. 2. Add interview notes and recruiter contact information. 3. Implement follow-up reminders and upcoming deadline tracking. 4. Allow users to edit and delete existing applications. 5. Export application records into CSV reports.
Not Important	Delegate (Use a library) 1. Use Java's built-in date and time library to handle date formatting and validation. 2. Use an existing CSV library for processing CSV files if needed. 3. Use a console formatting library to display application records in organized tables.	Delete (Cut it) 1. AI-powered job recommendations based on resumes and skills. 2. Automatic job scraping from LinkedIn, Indeed, and other websites. 3. User registration, login, and cloud synchronization. 4. A built-in resume builder.

5. Automatic job application submission through external websites.
